

## Steam your way to relaxation

Thinking about modernising your bathroom? Or would you like to transform your new dream bathroom into your own private spa with steam shower? The Küng SteamFIT makes your wishes of pure and lasting relaxation come true.

### Holistic relaxation

For thousands of years, people have known about the positive effects of steam on body and soul. The steam bath is the modern-day equivalent of the traditional Hammam or Turkish bath. With temperatures of between 40 to 45 °C and 100% humidity, it offers gentle hydrotherapy. SteamFIT is a straightforward and enjoyable way to boost your metabolism and immune system.

### High humidity. Deep impact.

In a steam bath, your body temperature rises 1 to 2 degrees, which inhibits the spread of certain germs and micro-organisms in the body.

Your immune system is thus strengthened and your circulation stimulated, helping to promote overall well-being and prevent colds, for example, or speed up your recovery. The deep impact of the steam also helps to relax your muscles, detox your organs, clean and firm up the skin and soothe rheumatic pains.

### Less is more at its best

Well-being is not purely a question of climate. The material, design and décor also shape the experience. The secret behind the elegant SteamFIT appearance is its solid surface material. Extremely resilient and easy to clean, this non-porous material is ultra-hygienic. Its matt-white surfaces make the steam shower a coveted design object. The optional storage niche and floating bench are also seamlessly integrated. The steam technology is completely concealed behind a pull-out compartment that blends harmoniously with the overall design.

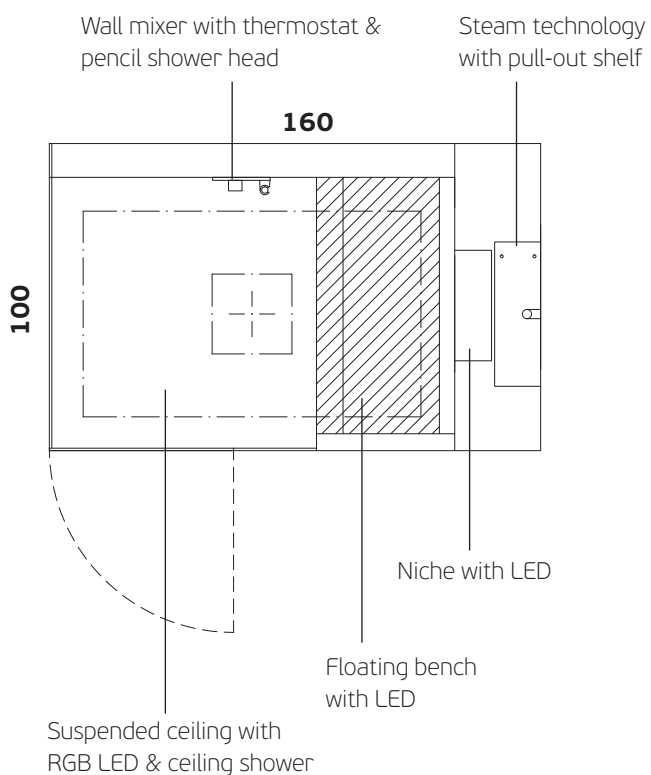

## Personal spa experience

No larger than a conventional shower, SteamFIT also fits perfectly into compact rooms. Whether free standing, built into a niche or as a replacement for an existing bath or shower, its cabin is made to measure and then equipped according to your specifications. We can make the experience even more atmospheric with LED modules, speakers or even an aroma system. Whatever effect you are hoping to achieve, the result is sure to be deeply relaxing.

### Example layout

#### SteamFIT at a glance

- Steam bath and shower in one cabin
- Minimalist design, quality materials
- Smooth, easy-clean solid surface material
- Shower floor for flush floor installation or installation on the floor on site
